

Change log
- Created at Sprint 5 - User - Conv -Anon - User - Mssg - Anon - Mssg
Sprint 7
- modified to reflect message, message_req, message_rep new models - changed id fields naming convention from userID to user_id
Sprint 9
- User unified and flag is used to simplify work and queries - Added attachments table for better normalization - Added tables for `oauth state` and `provider_oauth_token` - Added `UserKeyMaterial` table to hold the user's umk and state - Fixed relationship between conversation and message entities
Sprint 10
Updated with OAuth Tables, modified structure to improve shape :)

Note..
what if we added the external systems? or we wouldn't be having tables for all of them? Only add in the 'Entity Diagram' that is inheriting from them
